

Solution for Washing Machine

Shanghai Washing Machine Manufacturer integrates Design, R&D, Manufacture and Sale for washing machine. After years development, its product sales to Europe, South America, Africa and other market, involving in Hotel, School, Hospital, Army, Top Washing and other areas. All the time we have provided frequency inverter for their motor drive control.

They produce full-automation industry washing machine with whole suspension, isolated washing and water extractor, horizontal machine, vertical machine, water extractor, full-automation dryer, multi-roller combined ironing machine, dry cleaning machine, ironing table and integrated machine with washing, extractor, ironing, ect.

Dry Cleaning Machine:

Dry Cleaning Machine with the washing, filter, dry and recycle, detergent regeneration (petrol detergent dry machine), detergent circulatory functions, ect. Dry Cleaning Machine contains washing system, filter system, dry and recycle system (with cooling, drop separation functions), detergent distillation system. EDS1000 series frequency inverter play a important role in proceed of main motor drive.

Ironing Table:

Ironing Table is a washing machine and iron device in laundry. Its main units are single roller, two or three rollers. Roller turns by control and when its temperature goes up to point, wet clothes pass through the gap between rollers and lost most of moisture to achieve the effect of ironing. It widely used in proceed of bed sheet, tablecloth and other cloths ironing. EDS1000 series frequency inverter is regarded as the main motor driver.

Washing and Extractor Machine:

Washing and Extractor Machine is the simple name of automation industry washing and extractor machine. It avoids the complicated working process of common washer and dehydrator. Put in washings and setup button to lavation, rinse and dehydration process. Even with simple “one-touch operation” button to finish the washings. Machine volume include: 20KG, 30KG, 50KG, 100KG and so on.
